

NWA C02P Dry Verge – CE Marking

From the 1st July 2013 under the Construction Products Regulation (CPR) over 400+ Building Products were required to carry the CE mark covering a broad range of construction products. Numerous roofing products including but not limited to Roof Coverings, waterproofing products, roof windows and upstands are covered under the legislation.

Roof dry verges are not as yet a harmonised category under the legislation. For this reason CE Marking is not a requirement for dry verge products.

NWA welcomes the introduction of improved testing, certification and oversight of construction products. NWA look forward to being able to provide a CE mark with our products along with any necessary testing due to the quality of our products.

All NWA products comply with BS 5534 mechanical fixing requirements along with meeting the NHBC standards. All our products are manufactured to an exceptionally high standard in accordance with the internationally recognised ISO 9001 Quality Management System.
